## 1197. Minimum Knight Moves

Medium 222 89 Add to List Share

In an infinite chess board with coordinates from  $-\infty$  to  $+\infty$ , you have a knight at square  $[0, 0]$ .

A knight has 8 possible moves it can make, as illustrated below. Each move is two squares in a cardinal direction, then one square in an orthogonal direction.

Return the minimum number of steps needed to move the knight to the square  $[x, y]$ . It is guaranteed the answer exists.

## Example 1:

Input:  $x = 2, y = 1$   
Output: 1  
Explanation:  $[0, 0] \rightarrow [2, 1]$

## Example 2:

Input:  $x = 5, y = 5$   
Output: 4  
Explanation:  $[0, 0] \rightarrow [2, 1] \rightarrow [4, 2] \rightarrow [3, 4] \rightarrow [5, 5]$

## Constraints:

- $|x| + |y| \leq 300$

```
1 class Solution(object):
2     def minKnightMoves(self, x, y):
3         """
4         :type x: int
5         :type y: int
6         :rtype: int
7         """
8
```
