15 MySQL

```
SELECT seller_id
FROM Sales
GROUP BY seller_id
HAVING SUM(price) = (SELECT SUM(price)
                     FROM Sales
                     GROUP BY seller_id
                     ORDER BY 1 DESC
                     LIMIT 1 )
```

Great solution!

A little rewrite (use a variable `total_price` instead of using `1` ) to make it a bit more understandable :)

```
select seller_id from Sales as seller_id
group by seller_id
```
