

243. Shortest Word Distance

Easy  439  37  Add to List  Share

Given a list of words and two words *word1* and *word2*, return the shortest distance between these two words in the list.

Example:

Assume that words = ["practice", "makes", "perfect", "coding", "makes"].

```
Input: word1 = "coding", word2 = "practice"
Output: 3
```

```
Input: word1 = "makes", word2 = "coding"
Output: 1
```

Note:

You may assume that *word1* does not equal to *word2*, and *word1* and *word2* are both in the list.
