```
SELECT extra AS report_reason, COUNT(DISTINCT post_id) AS report_count
FROM Actions
WHERE action = 'report' AND action_date = '2019-07-04'
GROUP BY extra
```

I think you also need WHERE extra IS NOT NULL unless it is mentioned that "extra" will always be filled (regardless of it being optional).

```
SELECT extra as report_reason, COUNT(DISTINCT post_id) AS report_count
FROM Actions
WHERE extra IS NOT NULL
AND action = 'report'
AND action_date = DATE_ADD('2019-07-05', INTERVAL -1 DAY)
GROUP BY extra
```
