```

select player_id, device_id
from activity
where (player_id, event_date) in (
    select player_id, min(event_date)
    from activity
    group by player_id
)
    
```

I tried this query and it worked while running but the use cases while submitting failed

```

select player_id, device_id
from Activity
group by player_id
having(min(event_date))
    
```

Just curious why the having clause won't work.
