## 1100. Find K-Length Substrings With No Repeated Characters

Medium

👍 134

💬 5

❤️ Add to List

🔗 Share

Given a string `S`, return the number of substrings of length `K` with no repeated characters.

## Example 1:

Input: `S = "havefunonleetcode"`, `K = 5`

Output: 6

Explanation:

There are 6 substrings they are : 'havef','avefu','vefun','efuno','etcod','tcode'.

## Example 2:

Input: `S = "home"`, `K = 5`

Output: 0

Explanation:

Notice `K` can be larger than the length of `S`. In this case is not possible to find any substring.

## Note:

1.  $1 \leq S.length \leq 10^4$
2. All characters of `S` are lowercase English letters.
3.  $1 \leq K \leq 10^4$

```
1 class Solution(object):
2     def numKLenSubstrNoRepeats(self, S, K):
3         """
4         :type S: str
5         :type K: int
6         :rtype: int
7         """
8
```
