10

```
def multiply(self, A, B):
    cols = [(j, b) for j, b in enumerate(col) if b]
            for col in zip(*B)]
    return [[sum(row[j]*b for j, b in col)
            for col in cols]
            for row in A]
```

python

short
