```
select business_id                                # Finally, select 'business_id'
from
(select event_type, avg(occurences) as ave_occurences # First, take the average of 'occurences' group by 'event_type'
 from events as e1
 group by event_type
 ) as temp1
join events as e2 on temp1.event_type = e2.event_type # Second, join Events table on 'event_type'
where e2.occurences > temp1.ave_occurences           # Third, the 'occurences' should be greater than the average of 'occurences'
group by business_id
having count(distinct temp1.event_type) > 1         # (More than one event type with 'occurences' greater than 1)
```
