7

1. If with distinct keyword,

```
SELECT DISTINCT author_id AS id FROM Views
where author_id = viewer_id
ORDER BY id
```

2. If order by first, we need another Select and alias

```
SELECT id from (SELECT author_id AS id FROM Views
where author_id = viewer_id
ORDER BY id)a
GROUP BY id
```

3. If just with group by (automatically sorted by id)

```
SELECT author_id AS id FROM Views
where author_id = viewer_id
GROUP BY id
```
