1133. Largest Unique Number

Easy 71 6 Add to List Share

Given an array of integers `A`, return the largest integer that only occurs once.

If no integer occurs once, return -1.

Example 1:

Input: [5,7,3,3,9,4,9,8,3,1]

Output: 8

Explanation:

The maximum integer in the array is 9 but it is repeated. The number 8 occurs only once, so it's the answer.

Example 2:

Input: [9,9,8,8]

Output: -1

Explanation:

There is no number that occurs only once.

Note:

- $1 \leq A.length \leq 2000$
- $0 \leq A[i] \leq 1000$
