

## 291. Word Pattern II

**Hard** 391 24 Add to List Share

Given a `pattern` and a string `str`, find if `str` follows the same pattern.

Here **follow** means a full match, such that there is a bijection between a letter in `pattern` and a **non-empty** substring in `str`.

## Example 1:

Input: `pattern = "abab", str = "redblueredblue"`  
Output: `true`

## Example 2:

Input: `pattern = "aaaa", str = "asdasdasdasd"`  
Output: `true`

## Example 3:

Input: `pattern = "aabb", str = "xyzabcxyabc"`  
Output: `false`

## Constraints:

- You may assume both `pattern` and `str` contains only lowercase letters.
