

186. Reverse Words in a String II

Medium 417 96 Add to List Share

Given an input string, reverse the string word by word.

Example:

Input: ["t","h","e"," ","s","k","y"," "," ","1","s"," "," ","b","1","u","e"]
Output: ["b","1","u","e"," "," ","1","s"," "," ","s","k","y"," "," ","t","h","e"]

Note:

- A word is defined as a sequence of non-space characters.
- The input string does not contain leading or trailing spaces.
- The words are always separated by a single space.

Follow up: Could you do it *in-place* without allocating extra space?
